Honor Code

The Department of Computer Science takes the Honor Code seriously. Violations are easy to identify and will be dealt with promptly.

Course work is to be the sole work of each student unless the assignment explicitly states otherwise. Students may discuss problems with each other as long as everyone contributing to the discussion is given <u>explicit credit</u> for their contributions. Every assignment that you do with a partner must be accompanied with a `collaborators.txt` file listing the people with whom you worked.

I hope that you will help each other in learning the mechanics of how to write and compile programs in new languages, but please be aware that all solutions must be written up independently. <u>When in doubt as to what is appropriate, ask me.</u> Uncredited collaborations will be considered a violation of the honor code and will be handled using the College's Honor Committee. Please be aware that the most likely outcome of an Honor Committee hearing is a <u>failing grade in the course.</u>

Finally, note that the CS department uses automated plagiarism detection software.

Sharing Code

You may not share code in this class. A simple test to see if you are violating the honor code is whether you are copying and pasting code. You may not copy and paste code even if you developed the code together with your partner. You must write it up independently.

Computer Ethics

Students should be aware of the Code of Computer Ethics outlined in the Student Handbook. Violations, including uninvited access to private information and malicious tampering or theft of computer equipment or software, are subject to disciplinary action.

GitHub and Other Version Control Repositories

Sharing course related code in any version control repository not expressly authorized by the instructor will be considered an Honor Code violation.
