

CSCI 334:
Principles of Programming Languages

Lecture 17: Polymorphic Type Inference

Instructor: Dan Barowy

Williams

Announcements

No "assignment".

A short reading (Cardelli) for Monday.

Otherwise, work on your project.

Next week: "programming in the large"

<http://catb.org/jargon/html/F/foo.html>

Project Timeline

Project checkin: mostly complete by Nov 29

Project done: complete by Dec 6

Project presentation (5-10 minutes): Dec 11

Topics

Type inference

Project Q & A

Type Inference

type inference

```
let apply f x = f x
```

1. convert to λ expression
2. label with type variables
3. generate constraints
4. unify
5. rename variables

type inference

Not everybody loves this part of PL.

I hope that you can appreciate the **absence of magic**.

1. convert to λ expression

```
let apply f x = f x
```

```
apply =  $\lambda f. \lambda x. f\ x$ 
```

2. label with type variables

```
let apply f x = f x
```

```
apply = λf.λx.f x
```

3. generate constraints

$\langle \text{expr} \rangle ::= \langle \text{var} \rangle$ variable
| $\lambda \langle \text{var} \rangle . \langle \text{expr} \rangle$ abstraction
| $\langle \text{expr} \rangle \langle \text{expr} \rangle$ function application

Three rules, each corresponding to a kind of λ expression.

3.1. $\langle \text{var} \rangle$ constraint

No constraint.

3.2. abstraction constraint

$\lambda \langle \text{var} \rangle . \langle \text{expr} \rangle$

"left triangle rule"

Constraint: If the type of $\langle \text{var} \rangle$ is a and the type of $\langle \text{expr} \rangle$ is b , and the type of λ is c , then the constraint is $c = a \rightarrow b$.

3.3. application constraint

$\langle \text{expr} \rangle \langle \text{expr} \rangle$

"right triangle rule"

Constraint: If the type of $\langle \text{expr1} \rangle$ is a and the type of $\langle \text{expr2} \rangle$ is b , and the type of $@$ is c , then the constraint is $a = b \rightarrow c$.

3. constraints summary

Abstraction: If the type of $\langle \text{var} \rangle$ is a and the type of $\langle \text{expr} \rangle$ is b , and the type of λ is c , then the constraint is $c = a \rightarrow b$.

Application: If the type of $\langle \text{expr1} \rangle$ is a and the type of $\langle \text{expr2} \rangle$ is b , and the type of $@$ is c , then the constraint is $a = b \rightarrow c$.

2. label with type variables

let apply f x = f x

apply = $\lambda f. \lambda x. f x$

3. generate constraints

subexpression	type	constraint
f	a	n/a
x	b	n/a
f x	c	$a = b \rightarrow c$
$\lambda x. f x$	d	$d = b \rightarrow c$
$\lambda f. \lambda x. f x$	e	$e = a \rightarrow d$

4. unify

subexpression	type	constraint
f	$b \rightarrow c$	n/a
x	b	n/a
f x	c	
$\lambda x. f x$	d	$d = b \rightarrow c$
$\lambda f. \lambda x. f x$	e	$e = b \rightarrow c \rightarrow d$

4. unify

subexpression	type	constraint
f	$b \rightarrow c$	n/a
x	b	n/a
f x	c	
$\lambda x. f x$	$b \rightarrow c$	
$\lambda f. \lambda x. f x$	e	$e = b \rightarrow c \rightarrow b \rightarrow c$

4. unify

subexpression	type	constraint
f	$b \rightarrow c$	n/a
x	b	n/a
f x	c	
$\lambda x. f x$	$b \rightarrow c$	
$\lambda f. \lambda x. f x$	$b \rightarrow c \rightarrow b \rightarrow c$	

5. rename variables in alpha order

subexpression	type	constraint
f	$'a \rightarrow c$	n/a
x	$'a$	n/a
f x	c	
$\lambda x. f x$	$'a \rightarrow c$	
$\lambda f. \lambda x. f x$	$'a \rightarrow c \rightarrow 'a \rightarrow c$	

5. rename variables in alpha order

subexpression	type	constraint
f	$'a \rightarrow 'b$	n/a
x	$'a$	n/a
f x	$'b$	
$\lambda x. f x$	$'a \rightarrow 'b$	
$\lambda f. \lambda x. f x$	$'a \rightarrow 'b \rightarrow 'a \rightarrow 'b$	

5. rename variables in alpha order

subexpression	type	constraint
f	$'a \rightarrow 'b$	n/a
x	$'a$	n/a
f x	$'b$	
$\lambda x. f x$	$'a \rightarrow 'b$	
$\lambda f. \lambda x. f x$	$'a \rightarrow 'b \rightarrow 'a \rightarrow 'b$	

Is this the right answer?

$'a \rightarrow 'b \rightarrow 'a \rightarrow 'b$

```
> let apply f x = f x;;
val apply : f:( 'a -> 'b) -> x: 'a -> 'b
```

Lookin' good!

activity

```
let f g x = g (g x)
```
